Introduction

We want to present the requirements for the AAA Furnitures Catalog Website. This web-based application allows customers to browse furniture products and contact the company via WhatsApp for purchases.

[More Details](#)

Project Scope

AAA Furnitures Catalog Website is a responsive web application that enables:

Customer to:

- Browse furniture products with detailed information
- Filter and search through product listings
- Contact the company via WhatsApp for purchases

Admin to:

- Manage product information through a dedicated interface.
- Manage communication with customer

Product Description

Product Perspective

The product is a responsive web catalog with direct WhatsApp integration for customer inquiries.

Key components include:

- Frontend interface for product browsing
- Backend product management system
- Product database
- WhatsApp Business API integration

Product Functions

Product Presentation

- Display product categories
- Show product details (images, specifications, pricing)

item Search and filtering functionality

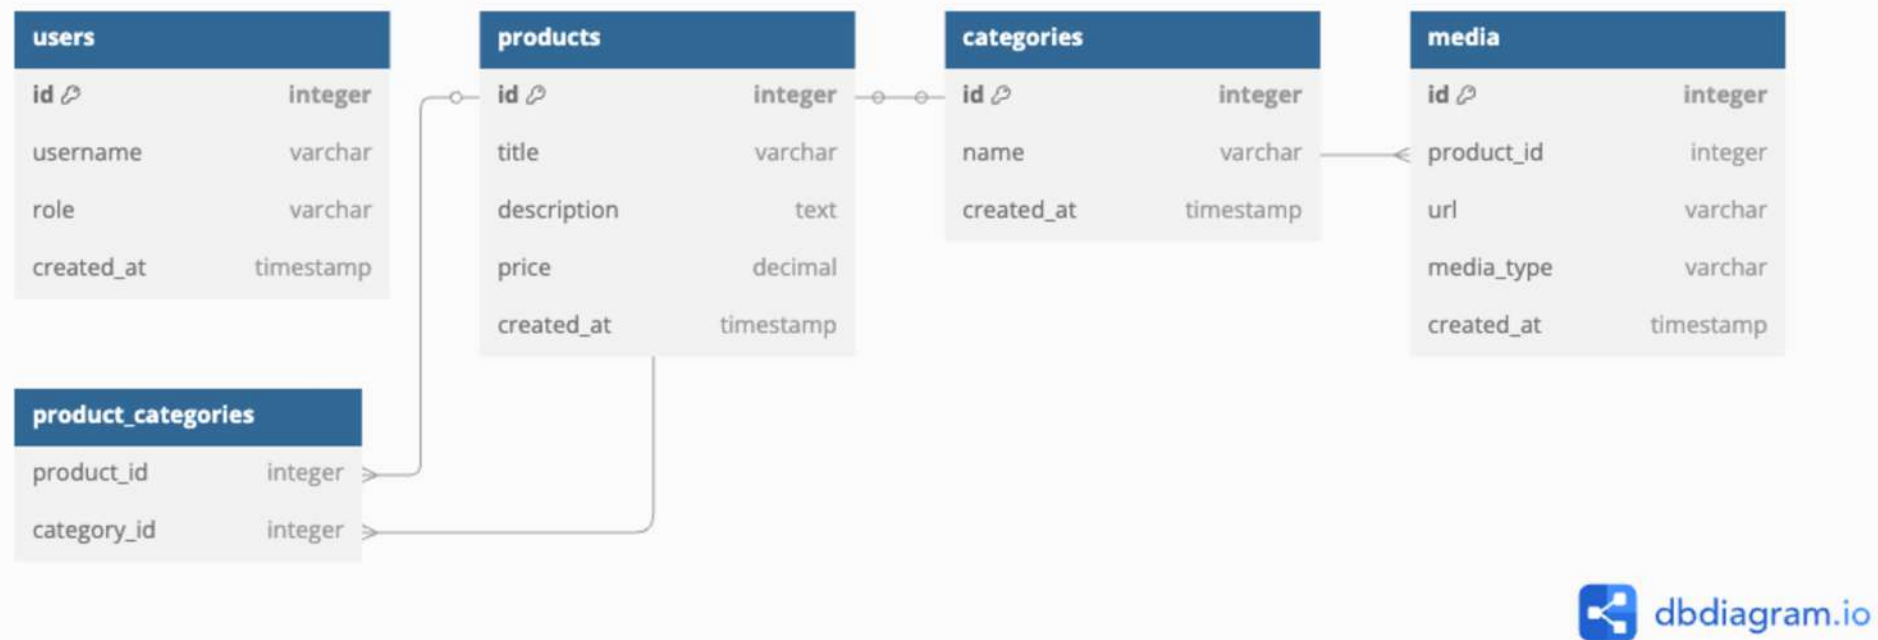

Admin Functions

- Manage products
- Manage communication with user

Product Description

User classes & characteristics:

Website Visitors

- Frequency: Variable (casual browsing to serious buyers)
- Functions: Product browsing, WhatsApp contact
- Technical Expertise: Basic web navigation skills

Administrators

- Frequency: Daily updates
- Functions: Full product catalog management
- Security: Protected admin interface

Operating env & constrains:

Server ENV
–Web server
–Content Management System

Client ENV
–Web Browser
–Mobile responsive

Database
–Relational Database (Supabase PostgreSQL)
–Cloud Bucket (AWS S3)

Technical Constrains
–Responsive design
–WhatsApp API Integration

Performance Constrains
–Can handle 1000 concurrent users
–Page and media load < 1 second

Security constrains
–Secure admin interface
–Database backup

Assumptions, dependencies, risks

Assumptions
–User has WhatsApp installed
–Primary access via mobile devices
–Product availability matches database

Dependencies
–WhatsApp Business API Availability
–Web hosting reliability
–CDN and Cloud Storage

Risks
–WhatsApp API changes
–Admin page security
–Inventory discrepancy

Title *

Botol Sabun Tabung Putih

Slug *

botol-sabun-tabung-putih

The URL-friendly name of the product, e.g. if the product is "Botol Minum", then the slug would be "botol-minum". This field should be unique as in no product should have the same slug with another.

Price *

90000

Description *

ya tempat sabun

Pages & Features

Product Catalogue Display

- Search
- Filter by Availability (In Stock or not) and by Categories (Materials or Functionality / Usage)

Contact Form Submission

- (Nodemailer, Google Sheet API)
- Send to Email and also Google Sheet Response

The screenshot shows a contact form submission interface. It includes four input fields: "Name/Surname" (with a sub-label "Name"), "Company" (with a sub-label "Company / Org Name"), "Email" (with a placeholder "your.email@gmail.com"), and "Phone" (with a placeholder "e.g., 08123456789 or +441234567890"). Below these fields is a large text area for the "Message" (with a placeholder "Message..."). A "Send Message" button is located at the bottom right of the form.

Working Hours

Monday - Friday

07.00 - 22.00

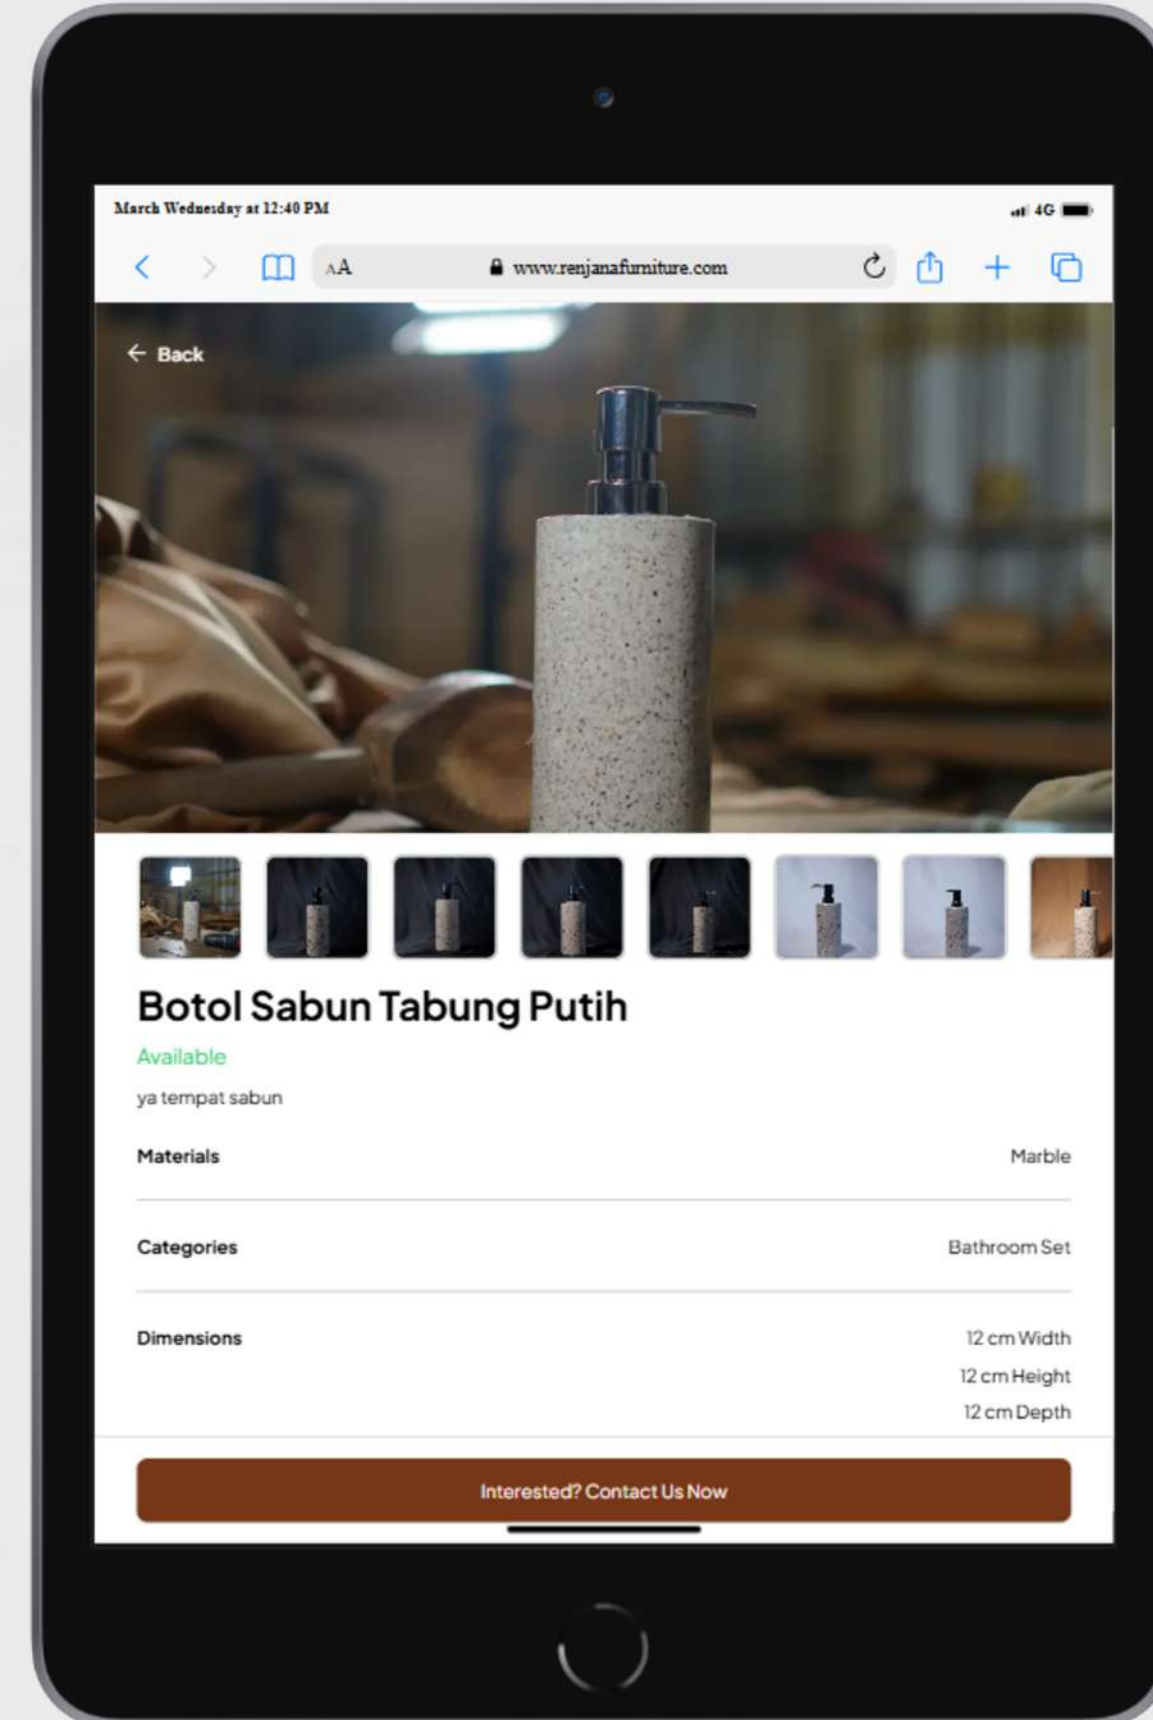

4. Warehouse Location Display

- (Google Maps API)
- Interactive Maps with button to Open in Maps Apps

Features

Product Page

- Product Image Gallery
- Scrollable
- Product Details
- Availability Product
- CTA Button to WhatsApp

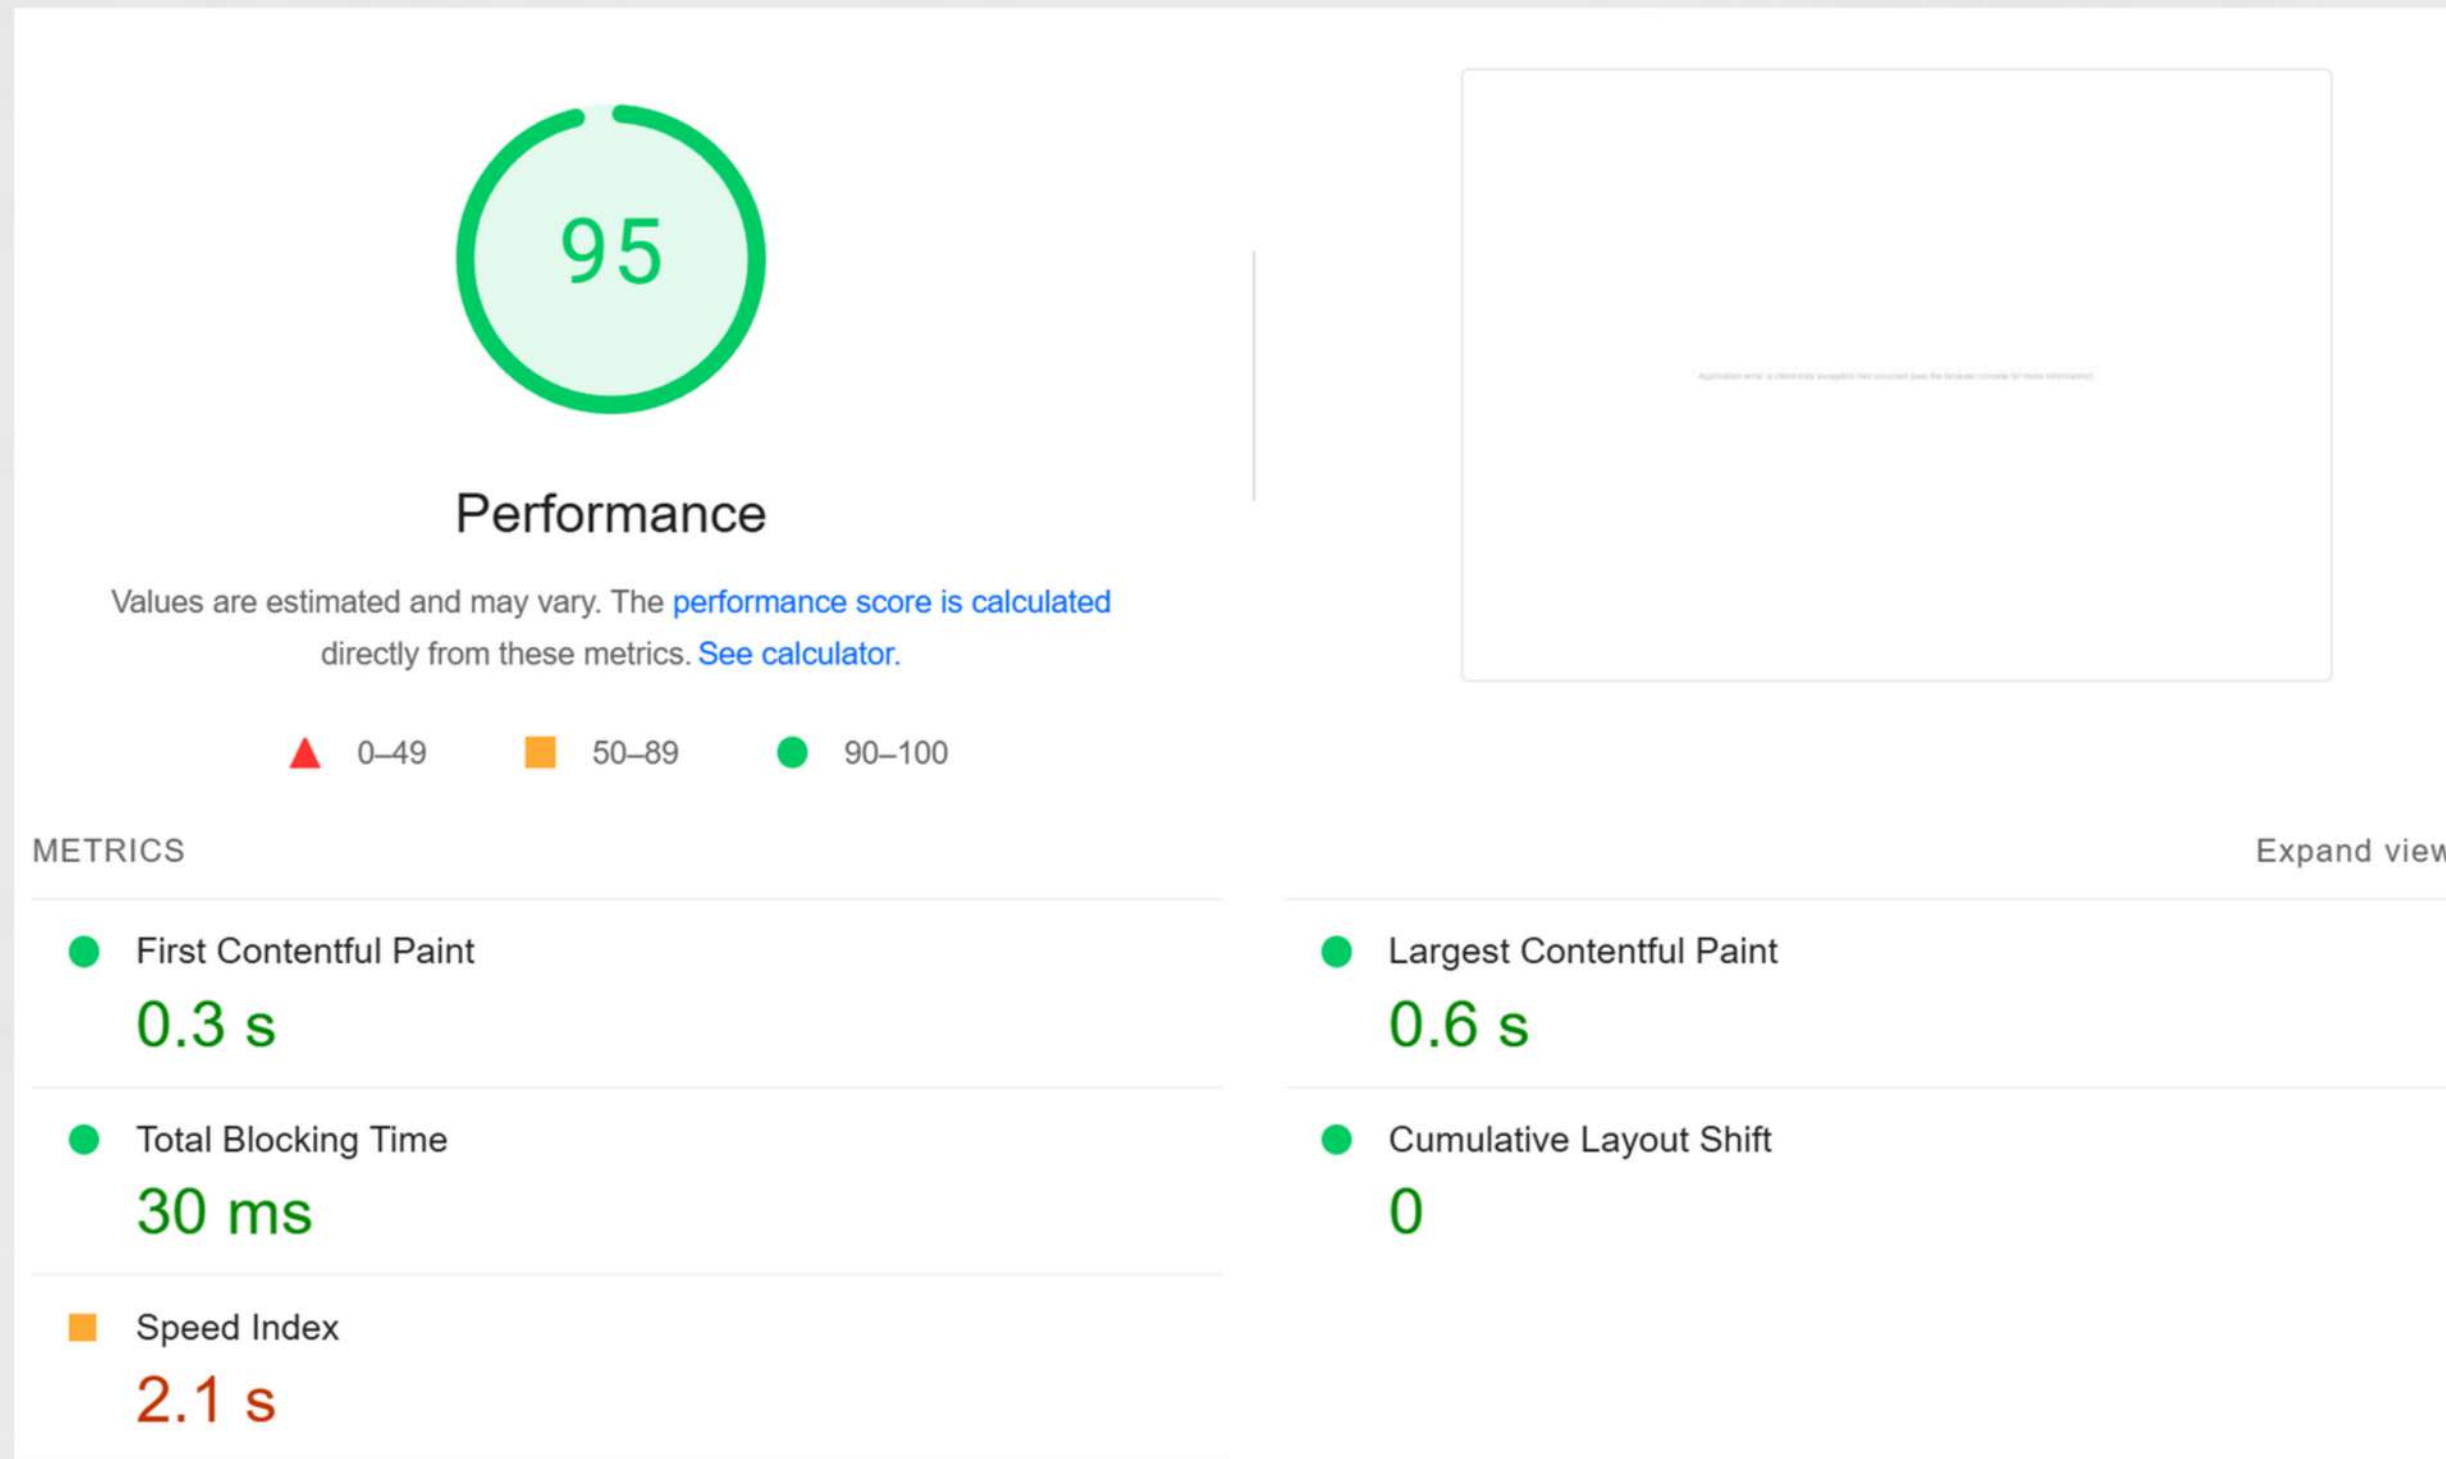

Performance Requirements

- **Page Load Speed:**
 - Largest Contentful Paint (LCP) 2.5< seconds
 - First Contentful Paint (FCP) of 1.8< seconds under standard network conditions.
- **Image Optimization:**
 - Images must be served in WebP format and lazy-loaded.
- **API Performance:**
 - Backend APIs should respond within 200ms
- **Search and Filtering:**
 - The product search and filtering functions should return results within 2 seconds
- **Database Queries:**
 - Queries should execute within 100ms

Performance Requirements

Tools to measure and ensure performance:
pagespeed.web.dev

Safety Requirements

Safety measures are essential to protect user data and ensure proper handling of catalogue data.

- **Dedicated 404 Page**, for error handing
- **Regular backups** to prevent data loss
- **Product description and pricing verification** to ensure nobody gets mislead
- **Admin panel** accessible only to certain people with valid credentials
- **HTTPS compliance** to ensure end to end encryption between user and server
- **Database security**, ensured by Supabase policies that restricts unauthorized access
- **Rate limiting**, to mitigate abuse and prevent denial-of-service attacks

Example 404 Page

Software Quality Attributes

The AAA Furnitures web app should adhere to high-quality software standards to enhance usability, maintainability, and reliability

Usability

The interface should be intuitive, ensuring users can browse, search, and complete purchases with minimal effort

Reliability

The system should achieve at least 99.5% uptime to ensure availability for customers

Scalability

The application must be scalable to accommodate increased traffic and inventory expansion without performance degradation

Maintainability

The codebase should be modular and well-documented to allow for future enhancements and bug fixes

Compatibility

The web app should be compatible with major web browsers (Chrome, Firefox, Safari, Edge) and mobile devices

Business Rules

The AAA Furnitures web app must follow operational principles that dictate how different roles interact with the system.

User Roles

- The system supports different roles
- Customers do not need to create an account and can browse products and place orders,
 - Administrators can manage inventory, orders via the admin panel.

Inventory Management

Only authorized administrators can add, update, or remove products from the inventory.

Customer Support

Users should be able to submit inquiries or complaints through a dedicated support line, either through WhatsApp or email linked on the footer of the website
